

RECOMMENDATION LETTER

Saurin Patel

Senior Design Engineer
Global Device and Packaging Unit, Sanofi
Cambridge, MA, USA
Email: Saurin.Patel@sanofi.com

To Whom It May Concern,

It is my privilege to recommend **Oghenefegor Favour Ugbine** for professional opportunities in mechanical and manufacturing engineering. In my capacity as a mentor during the **Sanofi 2025 Device Innovation Challenge**, I observed firsthand his technical competence, analytical rigor, and maturity as an engineer. His team, SanPumP, distinguished itself as a **Top 5 global finalist**, demonstrating innovative strength and disciplined execution in a high-expectation environment.

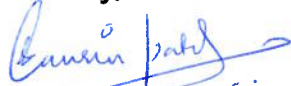

Mr. Oghenefegor possesses a distinguished academic record. He earned a Bachelor of Engineering in Mechanical Engineering and was subsequently selected among the **top one percent worldwide** for the highly competitive **Erasmus Mundus Joint Master's Scholarship** in Manufacturing 4.0. His graduate studies across France and Italy integrated mechanical engineering, materials engineering, sustainable manufacturing, and materials science within the Industry 4.0 framework.

His professional experience spans industrial maintenance, reliability engineering, automation support, and engineering research, including machining simulation and model calibration. He has demonstrated strong capability in preventive maintenance, diagnostics, and structured process improvement. His academic and professional output includes **seven peer-reviewed publications**, **over thirty professional certifications**, and participation in the **International Safety Product Mentorship Program** in Belgium.

Throughout the Sanofi Device Innovation Challenge, Mr. Oghenefegor demonstrated system-level mechanical design proficiency, CAD-based concept development, sustainability-aware decision-making, and effective use of artificial intelligence in early-stage engineering. His contributions were instrumental in the team's recognition and the associated **\$50,000 award** granted to SanPumP.

Mr. Oghenefegor is a disciplined, thoughtful, and innovative engineer, and I am confident he will make significant contributions in any industrial or product-focused engineering role. He has my strongest endorsement.

Sincerely,

Saurin Patel
