Dear Sir/Ma

Recommendation Letter for Mr Oghenefegor Favour Ugbine

I am pleased to write this recommendation at the request of Mr. Ugbine Oghenefegor. I have known Mr Oghenefegor for the past eight years, and in that time, we have maintained a cordial lecturer-student and subsequently, mentor-mentee relationship. Mr Oghenefegor was an undergraduate student in Mechanical Engineering at the Cross River University of Technology, Calabar, where he took several courses I led and delivered. Some of these include Applied Fluid Mechanics, Heat Transfer, and Automatic Control Systems. He was an active and engaged student who strived to be the best in all his endeavours. I pleasantly recall his probing questions, critical thinking abilities, and constant quest to understand concepts at the most fundamental level. His innovative mind shone through when he took co-leadership of the Fluid Mechanics group project that resulted in the successful design, manufacture, and testing of a low-cost beverage dispenser using gas lift technology. He was also well-liked amongst peers due to his selflessness in supporting his colleagues through peer tutoring and study group coordination.

In fulfillment of his bachelor's degree in mechanical engineering, Mr. Oghenefegor undertook an internship at the Nigeria Gas Company as a fire and safety engineer intern, where he gained hands-on practical experience in health and safety. This internship earned him the highest grade (A*) and a special commendation from the Supervisor. His dedication and desire for duty made him one of the best interns. He has also been involved in professional certification courses such as Digital Manufacturing and Industry 4.0, Manufacturing Operational Excellence, and an introduction to manufacturing business, etc, further demonstrating his commitment to continuous development.

Mr Oghenefegor consistently ranked amongst the top 5% of students across most subjects during his undergraduate studies, but beyond this, he was an active student in sports, clubs, and societies. I can attest to his level of intelligence, self-motivation, and work ethic. I find him to be naturally humble, polite, and soft-spoken yet curious, analytical, and persistent. Currently, he is among the 25 scholars who have completed their Master's in the prestigious Erasmus Mundus Scholarship for Manufacturing 4.0 to enhance his skillset in sustainable manufacturing, production engineering, and innovative industrial practices.

Based on his academic performance, research potential, and personal qualities, I strongly recommend Mr. Oghenefegor for any academic, research, or professional opportunity he chooses to pursue. I am confident he will bring diligence, creativity, and excellence to any institution or organization he joins.

Yours sincerely,

Dr AE Archibong
